

## Vaccine Schedule

- ~~8 weeks DAP done at Fancy Pants Labradoodles~~
- 12 weeks DAP
- 14 weeks **Leptospirosis** (optional *Leptospirosis 0 to 5 cases a year in WA, is present in contaminated water*) **risk assess for self**
- 16 weeks DAP
- 18 weeks **Leptospirosis** (optional *Leptospirosis 0 to 5 cases a year in WA is present in contaminated water*) **risk assess for self**
- 24 weeks Rabies
- Bordetella (only good for 6 months immunity; its vet recommended 2 to 3 days before being boarded at a facility) only works for 2 of 8 known strands. Similar to a flu vaccine for immunity time.  
\* IF boarding at **my home** DO NOT VACCINATE right BEFORE DROP OFF or can shed virus to any puppies on site. Will cancel boarding.

## Yearly Vaccines

- DAP can titer test if you want
- Rabies after the first shot will need a booster at the one year mark that lasts 3 years. After those three years you can choose to vaccinate again or titer test your dog to see if they have immunity still. We titer tested our older dog at 8, still had immunity from the first 3 year shot. Will not be the same for every dog.
